I love designing better processes and building them with AI. At RowCal that meant turning around a struggling branch, breaking property management work into new remote roles, and building AI agents that took error-prone manual work off the team. Outside work, I build agents people rely on daily, from a personal fitness coach to the back office of a freelance design business. I want to do this at a larger scale: finding the processes that should work differently, then designing and rolling out the AI-enabled version.

Professional Experience

Branch President of New England

2024–Present

RowCal · Nashua, New Hampshire

- Led the New England branch of a PE-backed community association management firm with full P&L ownership across a 95-association portfolio, including hiring, team leadership, client-manager assignments, and support for sales. Took over a struggling branch and brought it to profitability within the first year.
- Redesigned how clients are staffed company-wide. Started with a virtual assistant pilot, broke community manager workflows into tasks that could be handled remotely, and scaled the model into integrated Remote Community Association Manager roles, cutting cost per employee by 65% while maintaining service quality.
- Built a set of AI agents for the branch's recurring multi-system work, including ones that ran manager transitions across CINC, WebAxis, and SharePoint, reassigned tasks, roles, and verified every change. Replaced a 15-minute manual process per association where roughly one in three changes had an error previously.
- Automated client intake and reporting with an agent that ingests clients into a SQLite database tracking 100+ data points per association, from contracts and financials to governance, board contacts, and staffing, and publishes a refreshed Excel tracker to the team's shared OneDrive every weekday morning. Used for resource planning, to hold CAMs to each client's contract requirements, and monitor client satisfaction with touch points.
- Coached managers and other leaders to use AI tools in daily work: turning board meeting recordings into finished minutes (saving an hour or more per meeting), drafting client email replies, and working through spreadsheets and documents. Also helped establish and pilot STAN AI for client care, which cut inbound volume by 25%.
- Built a company-wide client segmentation framework for leaders to set retention strategy, match resources to client value, and to fine tune sales targets.

Personal AI & Automation Projects

2025–Present

- Built an AI agent that runs the back office for a freelance design business: the owner logs projects and hours by talking to it, and it drafts invoices for her approval, sends them, matches incoming payments to open invoices, warns when hours exceed the client agreement, and flags tax set-asides.
- Built an AI fitness coach that consolidated my fitness apps into one system: a local app that brings together smartwatch, workout, and nutrition data against a two-year training plan, run by a conversational agent that logs meals as I describe them, tracks the macros left for the day, and keeps me accountable.
- Shipped two working apps as the product owner directing AI coding tools, without writing the code myself: a Windows backup client with encrypted cloud storage and 170+ automated tests, and an Android app that keeps an ebook and its audiobook in sync across devices.

Founder & Managing Partner
2020–2024

Impact House Buyers · Goffstown, New Hampshire

- Built the systems behind the business, including a proprietary tool for evaluating properties in the field and Salesforce-based integrations connecting acquisition workflows across SaaS platforms.
- Founded and grew a real estate acquisition business to $500K in annual revenue, with a customer acquisition engine averaging 50 contracts per year.

Director of 3D Technology
2020–2021

3XR · Wakefield, Massachusetts

- Defined standards for a proprietary digital format and worked with engineering on vendor-facing tools that drove cross-platform compatibility and outside adoption.
- Led emerging-technology research for a 20+ member enterprise consortium, including Boeing, Lockheed Martin, and ExxonMobil. Presented findings that guided product and platform decisions.

Senior Manager
2018–2020

Wayfair · Boston, Massachusetts

- Set product direction and led a 30+ person production team delivering 10,000+ digital assets per month. Used production data to track progress and manage timelines and budgets across large initiatives.
- Evaluated and introduced new technologies that improved quality and reduced per-unit costs. Built a management team with production, analytical, and strategic skills.

Manager
2015–2018

LEGO · Billund, Denmark

- Owned the three-year roadmap for LEGO's Digital Element Platform. Presented the strategy to senior leadership and established an adoption framework that became the company standard.
- Launched a new digital product format and managed a $1M contract transformation, from initial concept through integration with legacy systems.

3D Modeler
2009–2015

DreamWorks Animation · Redwood City, California

- Built custom production automation tools that streamlined studio workflows and reduced manual work in the creative pipeline.
- Contributed to films including *Puss In Boots*, *Mr. Peabody and Sherman*, and *Rise of the Guardians*. Managed teams and mentored junior artists.

Education & Certifications

CMCA, Certified Manager of Community Associations
Community Associations Institute | 2026

The Art Institute of Portland
B.S. in Media Arts and Animation, Honors | 2005

Milwaukee Area Technical College
A.A.S. in Computer Graphics | 2002

Core Capabilities
